PROFESSIONAL SUMMARY

Frontend Engineer with 3 years of experience building production web and mobile applications using React, Next.js, and TypeScript. Experienced in scalable frontend systems, Design System implementation, reusable component architecture, and API-driven business workflows.

Hands-on across frontend, backend APIs, and database integration when projects require end-to-end ownership. Experienced in improving maintainability and developer workflows through codemod automation, frontend performance optimization, and scalable UI patterns across web and mobile platforms.

Focused on maintainable frontend engineering, cross-functional collaboration, and shipping product-quality code.

TECHNICAL SKILLS

Frontend	React.js · Next.js · TypeScript · Tailwind CSS · Ant Design
State & Data	Redux Toolkit · TanStack Query · Zustand
Mobile	React Native · Expo · Android Studio · Xcode
Backend	Node.js · NestJS · Express.js · Firebase Cloud Functions
Database	Firebase Firestore · PostgreSQL · Prisma ORM
Testing	Jest · React Testing Library · Playwright
API & Tools	REST APIs · Google Sheets API · Postman · Figma
Version Control	Git · GitHub · GitLab
Architecture	Design Systems · Design Tokens · Component Architecture · Performance Optimization

EXPERIENCE

Frontend Engineer · **7 Solutions Co., Ltd.** Jul 2025 – Present · Bangkok

LotteryPlus Platform — Design System & Frontend Architecture

- Owned the Design System migration as the sole engineer assigned in a Next.js + TypeScript codebase, delivered alongside regular feature work
- Authored codemod scripts with AI-assisted workflows that updated 460+ color-token files and 250+ typography files, turning 4+ weeks of manual refactoring into automated execution; validated with Playwright visual regression tests to improve migration safety and frontend consistency during large-scale refactoring
- Built a reusable component library of 22+ component types with Tailwind CSS — covering UI tokens, buttons, modals, text fields, dropdowns, and typography — and established semantic naming conventions that unified UX/UI-Frontend workflows, reduced UI duplication team-wide, and improved frontend consistency and developer workflow efficiency
- Developed Back Office features and integrated REST APIs with TanStack Query for server-state management, shipping scalable, maintainable frontend modules across business workflows
- Implemented unit and integration tests (API + UI) with Jest inside a CI/CD pipeline; participated in code reviews, shared Design System patterns and component conventions with teammates, and contributed to architecture decisions in sprint planning

HR Recruitment Platform — Internal Product (Sole Developer)

- Owned the platform end-to-end as the sole developer in React.js + Node.js — designed the Firestore schema, architected the API layer with Firebase Cloud Functions, and made every technical decision from inception to production deployment
- Engineered a Google Sheets API integration function that migrated 6,000+ candidate records into Firestore (custom-written API function, not an automated pipeline) — now serving an internal team of 5–6 recruiters daily
- Delivered recruiter KPI dashboards (daily / weekly / monthly performance summaries), CRUD-enabled interactive data tables, and vendor & client summary pages

- Designed and implemented a **company-branded PDF resume generator** that exports candidate profiles as formatted PDF templates directly from the platform

ERP Platform — Learning Management System (LMS) Module

- Developed **frontend modules in React.js** for course and learning-space management workflows, integrating **TanStack Query** for efficient server-state management and data fetching
- Designed **shared utilities and custom React hooks** for the LMS UI, **reducing repetitive frontend implementation effort** across modules; **lifted a permission-checking hook into a React Context provider** to enable centralized **role-based access control** across learning-space modules
- Contributed to the **NestJS backend** — implemented database seed scripts and **2 REST API endpoints** backed by **PostgreSQL via Prisma ORM**, demonstrating **cross-layer full-stack capability** within a single product delivery cycle

Software Engineer · **AMR Asia Public Co., Ltd.**

Sep 2023 – Jul 2025 · Bangkok

EV Charger Application — Back Office Admin

- **Independently initiated the BO admin from scratch** using **React.js + Redux Toolkit + Ant Design** — took ownership of frontend architecture and implementation decisions, delivering a **production system adopted by the internal operations team**
- Built a **reusable admin component library** (data tables, forms, modals, charts, dashboards) that accelerated feature delivery across charger management, real-time dashboards, analytics reports, and operational admin modules
- Refined **Redux Toolkit state organization** with a **state separation strategy** that **isolated chart-heavy dashboard modules from high-frequency state updates**, reducing unnecessary re-renders across analytics views; added **Axios interceptors** for centralized request/response handling and error logging
- Integrated **REST APIs** for station management, user management, payment flows, and operational reporting — this BO serves as the admin backend for the EV Charger mobile application

EV Charger Mobile Application

- Led **full version migration of the React Native (Expo) app** — identified SDK compatibility gaps and **upgraded Android and iOS SDKs end-to-end** for a stable cross-platform release
- Optimized **real-time map rendering performance** — diagnosed excessive re-renders during high-frequency coordinate updates and applied **memoization (React.memo, useMemo)** to scope down render trees
- Shaped UX/UI direction from minimal wireframes through direct stakeholder collaboration — **proposed and shipped OAuth (Google) sign-in and biometric authentication (Face ID / Fingerprint)** to streamline user login
- **Independently managed end-to-end deployment to Google Play Store and Apple App Store** with **Android Studio** and **Xcode** — builds, provisioning, store submission, and platform-specific optimizations

Maintenance & Production Support — Solar Cell Billing BO · AS Macharge Marketing Website

- Maintained two production frontend systems in **React.js + Tailwind CSS + Ant Design** — developed new features, integrated **REST APIs** for billing workflows and business logic, and delivered UI updates, responsive fixes, and content adjustments aligned with business requirements
- Collaborated cross-functionally with **frontend, backend, PM, and SA teams** throughout implementation cycles

EDUCATION

Bachelor of Business Administration in Airline Business Management · **Suan Dusit University**, *Graduated*
Bangkok 2020

LANGUAGES

English — Intermediate · **Chinese** — Basic conversation (spoken only)
